

Multi-Layer Filtration Air Purifier

This air purifier features a multi-layer filtration system. It removes dust, pollen, smoke, and odors to improve air quality in indoor environments.

Product Overview

Advanced Air Purification System

The GL-8138 is a professional-grade air purification system engineered to significantly improve indoor air quality. Utilizing a multi-layer filtration process, it effectively captures and removes common airborne pollutants such as dust, pollen, smoke, and unpleasant odors. Designed for versatility, it features a digital display for real-time air quality monitoring and adjustable fan speeds, making it an ideal solution for homes, offices, and various indoor commercial environments.

Technical Specifications

Filtration System

Multi-layer Filtration

Model Number

GL-8138

Features

Key Features

- Real-time digital air quality monitoring
- Adjustable fan speed settings
- Effective against dust, pollen, and smoke
- Odor neutralization capabilities

Applications

Suitable Environments

Residential, Office, Indoor Commercial
