

Multi-Pair Communication Cable for Voice and Data

This multi-pair communication cable is designed for voice and data transmission in telecommunication networks. Its robust outer jacket provides environmental protection, while individually insulated conductors maintain signal integrity.

Overview

Professional Communication Cable

The HYA series multi-pair communication cable is engineered for reliable voice and data transmission within telecommunication networks. Featuring a robust outer jacket and individually insulated conductors, this cable ensures signal integrity and environmental protection. It is versatile enough for both indoor and outdoor installation requirements, making it a dependable choice for diverse communication infrastructure projects.

Technical Specifications

Installation Environment

Indoor • Outdoor

Cable Type

Multi-Pair Communication Cable

Primary Applications

Voice Transmission, Data Transmission, Telecommunication Networks

Model Identifier

HYA 2400X2X0.4
