

Multi-Plate Clutch Assembly

This high-performance clutch assembly is designed for optimal power transfer and durability. It features a multi-plate design that increases the friction surface area, providing reliable engagement and reduced slippage in high-torque conditions.

Product Overview

High-Performance Multi-Plate Clutch Assembly

This multi-plate clutch assembly is engineered for optimal power transfer and superior durability in demanding automotive applications. By utilizing a multi-plate design, it significantly increases the friction surface area, which ensures reliable engagement and minimizes slippage even under high torque conditions. Constructed from hardened steel, the assembly is built for maximum wear resistance and an extended service life in professional use cases.

Technical Specifications

Design Type	Multi-Plate
Material	Hardened Steel
Key Performance Features	High Torque Capacity, Reduced Slippage, Wear Resistant, Extended Service Life

Application

Suitable Applications

- Automotive Drivetrain
- High-Performance Vehicles
- Heavy-Duty Applications
