

Multi-Plate Motorcycle Clutch Assembly

This is a multi-plate clutch assembly designed for motorcycles. It consists of a clutch basket, friction plates, and steel plates to transmit power.

Product Overview

High-Performance Multi-Plate Clutch Assembly

This multi-plate clutch assembly is engineered for reliable power transmission in motorcycle drivetrains. It features a robust clutch basket with precision-machined slots, housing a series of friction and steel plates designed for optimal engagement. The assembly ensures smooth power transfer from the engine to the transmission, providing consistent performance under varying load conditions.

Technical Construction

Components

- Clutch Basket
- Friction Plates
- Steel Plates

Operational Mechanism

Power Transmission • Friction Engagement • Disengagement

Material Highlights

Aluminum, Hardened Steel, High-Friction Composite
