

Multi-Solution Injection Cleaning System

This cleaning system uses syringes to inject various cleaning solutions. It allows for precise control over the type and amount of cleaning agent used.

Product Overview

Precision Cleaning Capabilities

The Multi-Solution Injection Cleaning System is designed for specialized industrial cleaning applications requiring precise chemical delivery. By utilizing a multi-syringe configuration, this system allows for the accurate application of various cleaning agents, ensuring optimal dosage and surface treatment. It is an ideal solution for complex maintenance tasks where different chemical solutions must be managed and applied in controlled quantities.

Technical Details

Delivery Mechanism

- Syringe-based injection
- Multi-channel dosing
- Manual or automated control

Application Method	Injection-based precision cleaning
Solution Compatibility	Multi-agent, Liquid-based, Variable viscosity

System Metrics

Performance Indicators

3 channels

Injection Channels
