

Multi-Speed Bicycle Freewheel

This multi-speed freewheel is designed for bicycle drivetrains. It allows riders to coast without pedaling, providing efficient power transfer.

Product Overview

High-Performance Multi-Speed Freewheel

This multi-speed freewheel is precision-engineered for bicycle drivetrains, featuring stacked sprockets that provide versatile gear ratios for various riding conditions. The integrated freewheel mechanism allows for seamless coasting, ensuring efficient power transfer and reliable performance. Constructed from high-durability materials, this component is an ideal upgrade or replacement part for professional-grade and recreational bicycle systems.

Technical Specifications

Model Identifier	SR6-2
Component Type	Freewheel
Compatibility	Multi-speed drivetrain, Standard bicycle models
