

Multi-Speed Bicycle Freewheel Cassette

This multi-speed freewheel cassette is designed for optimal performance and durability. The precision-engineered tooth profiles enable smooth and precise shifting, enhancing the overall cycling experience.

Overview

High-Performance Cycling Component

The HG-601 is a high-quality multi-speed bicycle freewheel cassette engineered for optimal performance and durability. Constructed from robust materials, it ensures reliable power transfer and smooth, precise shifting across a wide range of gear ratios. Designed for compatibility with standard bicycle hubs, this component is an ideal choice for both professional cyclists and recreational riders seeking a dependable upgrade.

Technical Specifications

Installation Requirements

- Compatible with standard bicycle hubs
- Easy installation process
- Locking mechanism requires 40N-m torque

Model Identifier	HG-601
Installation Torque	40 N-m

Features

Key Features

Multi-speed configuration • Precision-engineered tooth profiles • Robust construction • Smooth shifting
