

Multi-Stage Water Purification System

This multi-stage water purification system is designed for household use. It removes impurities such as colloids, rust, bacteria, sediment, suspended solids, and red worms from water.

Product Overview

Advanced Multi-Stage Filtration

This multi-stage water purification system is engineered to provide high-quality, safe drinking water for household environments. By utilizing a comprehensive filtration process, the system effectively targets and removes a wide range of common water contaminants. It is designed to ensure clarity and purity, offering a reliable solution for clean water access.

Filtration Capabilities

Filtration Technology

- Multi-stage filtration process
- Sediment removal
- Bacterial elimination
- Suspended solid reduction

Contaminants Removed

Colloids, Rust, Bacteria, Sediment, Suspended Solids, Red Worms

Application

Intended Use

Household • Drinking Water • Residential
