

Multi-Station Flexographic Printing Press

This multi-station flexographic printing press is designed for high-volume printing on flexible materials. It features multiple printing units arranged vertically, each equipped with inking rollers, plate cylinders, and impression cylinders.

Overview

High-Performance Flexographic Printing

This multi-station flexographic printing press is engineered for high-volume production on flexible materials, making it an ideal solution for labels and packaging applications. The system features a robust, vertical printing unit arrangement designed to ensure stability and consistent quality throughout long print runs. Equipped with precise inking rollers and cylinder controls, it offers the reliability required for demanding industrial printing environments.

Technical Specifications

Printing Technology	Flexographic
Configuration	Multi-station vertical arrangement
Suitable Applications	Labels, Flexible Packaging, High-Volume Printing

Components

Key Components

- Inking rollers
- Plate cylinders
- Impression cylinders
- Integrated control panel
- Ink delivery system

Construction

Robust Frame • Industrial Grade
