

Multi-Story Building Construction

This cement is suitable for constructing multi-story buildings. It provides a durable base for urban construction projects.

Project Overview

Project Overview

This multi-story construction project involves the development of a modern building structure. The project scope includes complex foundation work, specifically deep pit excavation and the installation of extensive retaining pile systems. The construction adheres to high quality standards, ensuring structural integrity for the 18-floor main building.

Technical Specifications

Foundation Pit Depth

8.93 meters

Deep Foundation Pit

Main Building Floors	18 floors
Total Retaining Piles	405
