

Multifunctional Air-Suction Seeder for Maize Wheat Soya Bean and Rice

This multifunctional seeder utilizes an air-suction system for precise and stable seeding. It is applicable for maize, wheat, soya bean, and rice, and features a leakage alarm and seeded number calculation for each row.

Overview

High-Efficiency Planting Solution

This multifunctional air-suction seeder is engineered for efficient soil turning and precise planting operations. Designed to integrate seamlessly with tractors, it offers automated planting with accurate seed placement and optimal soil coverage. Its robust construction ensures reliable performance across diverse farming conditions, helping to enhance overall productivity and optimize crop yields.

Key Features

Primary Functions

- Soil turning
- Automated planting
- Precise seed placement
- Soil coverage

Compatible Crops

Maize, Wheat, Soya Bean, Rice

Technical Specifications

Operational Metrics

1 Multifunctional
Functionality

Adjustable Features

- Planting depth
- Row spacing

Design Highlights

Large-capacity hopper • Tractor-integrated • Durable construction
