

Multifunctional Waterproof Paint Spraying Machine

This multi-functional paint spraying machine features a powerful copper motor with integrated air pressure storage. It is designed for various applications including joint leaks, crack repair, and interior and exterior spraying.

Product Overview

Professional Spraying Solution

The CY770 multifunctional spraying machine is an advanced screw-type tool designed for efficiency in small to medium painting and grouting projects. Featuring a robust pure copper motor and integrated air storage, it offers reliable performance for diverse applications ranging from tunnel leak repairs to wall putty spraying. Its portable design and high-capacity tank make it a practical choice for labor-saving operation in both interior and exterior environments.

Technical Specifications

Technical Details

Parameter	Specification
Voltage	220V
Frequency	50Hz
Motor Type	AC Brush
Pump Type	Air Compressor

Applications

Use Case Scenarios

- Expansion and settlement joint leak repair
- Subway and tunnel waterproofing
- Floor coatings
- Crack and hollow reinforcement
- Interior and exterior wall painting

Applicable Materials

JS Waterproof, External Wall Putty, Putty Paste, Penetration Base Essence, Anti-corrosion Materials, Fire-proof Materials, Cement Slurry, Dry Powder
