

Multistage Centrifugal Water Pump

This multistage centrifugal pump is designed for high-pressure applications requiring reliable performance. It is suitable for water supply, pressure boosting, irrigation, and industrial uses.

Overview

High-Performance Centrifugal Solution

This multistage centrifugal water pump is engineered for demanding applications that require consistent high pressure and reliable performance. Built with a robust construction and corrosion-resistant materials, it is ideal for water supply systems, pressure boosting, and industrial irrigation. The multistage design maximizes output efficiency while maintaining low power consumption, ensuring a cost-effective operation for professional users.

Motor Specifications

Insulation Class

Class F

Protection Class

IP55

Motor Phase

Single phase

Thermal Protection

Yes

Technical Features

Key Components

- TEFC Motor
- Stainless Steel Impeller
- Mechanical Seal

Suitable Applications

Water Supply, Pressure Boosting, Irrigation, Industrial
