

Multistage Submerged Centrifugal Pump

This is a TPH series multi-stage submerged centrifugal pump. It is designed for efficient fluid transfer.

Overview

Professional Submerged Centrifugal Pump

The TPH series multi-stage submersible centrifugal pump is a high-performance solution engineered specifically for demanding industrial environments. It is optimized for the efficient circulation and delivery of machine tool coolants. Designed for reliability, this multi-stage unit provides consistent flow and pressure for essential industrial machinery applications.

Performance Metrics

Performance Highlights

55 L/min

Max Flow Rate

36 m

Max Head

0.75 kW

Power Rating

2850 RPM

Operating Speed

Technical Specifications

Electrical Data

Parameter	Value
Voltage	220V
Frequency	50Hz
Horsepower	1 HP

Hydraulic Connections: 1 inch x 1 inch

Maximum Suction Lift: 9 m

Application

Recommended Use: Industrial Machinery, Coolant Circulation, Machine Tool Maintenance
