Product Overview

Advanced Submersible Pumping Solution

This multistage, medium-cooled submersible pump is engineered for reliable water supply in both garden and domestic environments. It features an intelligent control system that automatically detects dry-running conditions, protecting the pump from damage and ensuring efficient operation. Designed for longevity, the unit incorporates a built-in non-return valve to prevent issues caused by dirt or sand encrustations.

Key Features

Suitable Applications

- Rainwater harvesting
- Domestic water supply
- Garden irrigation
- Pressure boosting
- Well water extraction

Protection Systems

Dry-run Protection, Non-return Valve Protection, Automatic Control, Sand/Dirt Resistance

Performance

Performance Highlights

1 Multistage

Design Type

Construction

Material Composition

- Stainless steel body
- Robust thermoplastic components
