

N95 Particulate Respirator with Exhalation Valve

This N95 particulate respirator offers reliable respiratory protection against airborne particles. Its circular design includes a central exhalation valve to minimize heat and moisture buildup.

Product Overview

Professional Respiratory Protection

The N95 Particulate Respirator is engineered to provide reliable protection against non-oil-based airborne particles in industrial and construction environments. Featuring a central exhalation valve, this mask effectively reduces heat and moisture buildup for improved wearer comfort during extended use. Constructed with multiple layers of high-efficiency filter media, it ensures consistent performance and a secure fit via adjustable straps and an integrated nose clip.

Technical Specifications

Filtration Standard

N95 • NIOSH Compliant

Suitable Environments

- Industrial settings
- Construction sites
- General dust protection

Key Features

Exhalation Valve, Multi-layer Filtration, Adjustable Straps, Nose Clip

Performance Metrics

Particle Type

Non-oil-based particles
