

Neon Tube Support Electrodes

These are support electrodes designed for use in neon tubes. They provide support and electrical contact within neon lighting systems.

Product Overview

High-Performance Neon Tube Components

These neon tube support electrodes and covers are engineered to provide reliable structural support and electrical conductivity for professional lighting installations. Available in a wide variety of color temperatures and coatings, these components allow for precise control over ambience and light intensity. They are suitable for high-end applications where specific color rendering and durable light output are required.

Color Series

Available Color Varieties

- Bright white (PT20)
- Snow white (PT21)
- Tri base white (HT16)
- Standard white (HC14)
- Standard blue (HC60)
- Ocean blue (HT72)
- Tri base green (PT54)
- Standard green (HC51)
- Deep purple (PT81)
- Tri base red (HT21)

Color Temperatures

15000K, 4500K, 3500K, 2700K, 2400K

Specifications

Component Use

Neon Tube Support • Electrode Cover • Insulation
