

Network Communication Module

This network communication module is designed for telecommunications and data networking infrastructure. It features multiple ports for connectivity and indicator LEDs for status monitoring, and is designed for rack mounting.

Overview

High-Performance Network Connectivity

This network communication module is engineered for robust data transmission and reliable infrastructure management. Designed for seamless rack-mount integration, it features multiple connectivity ports and real-time status monitoring via indicator LEDs. It is an essential component for complex telecommunications and data networking environments requiring consistent performance.

Technical Specifications

Connectivity Ports

Multi-Port Configuration • Rack-Mountable

Status Indicators

- ACT (Activity)
- CDA (Carrier Detect/Alarm)

Model ID	JDSU-18
Reference Number	JDSU180044
