Product Overview

Robust Network Enclosure

This network equipment cabinet is a professional-grade enclosure designed to house and protect sensitive hardware such as servers, routers, and switches. Featuring a high-performance perforated door, it ensures optimal airflow to prevent overheating and maintain consistent device temperatures. The unit combines sturdy construction with integrated cable management solutions, providing a secure, organized environment for critical infrastructure.

Design & Features

Ventilation	Perforated door design
Security	Secure locking mechanism, Push-to-open handle
Cable Management	Yes

Application

Compatible Equipment

- Servers
- Routers
- Switches
