

Network Router and Switch

This device functions as both a network router and a switch. It enables efficient data transfer and network management.

Product Overview

Professional Network Solutions

This versatile networking equipment combines routing and switching capabilities into a single, efficient hardware solution. Designed for modern IT infrastructure, it provides the reliability and connectivity required for enterprise-level data management. The unit ensures seamless traffic flow and scalable performance for demanding network environments.

Category Details

Primary Category	Electronics Information Products
Sub-Category	Computer Network Equipment
Product Type	Router, Switch
