

Network Routers and Switches

These are essential networking devices that direct data traffic between networks. They enable connected devices to share resources and communicate with each other efficiently.

Product Overview

High-Performance Networking Infrastructure

These professional-grade network routers and switches are engineered for demanding data center and control room environments. Designed to provide reliable connectivity, they support intensive network management tasks and high-traffic routing. The hardware is optimized for seamless integration into infrastructure monitoring systems, ensuring consistent system performance and security.

Performance Metrics

Operational Efficiency

100 %

Uptime Reliability

40 ports

Integrated Management Ports

Capabilities

Key Features

- Enterprise-grade routing protocols
- Advanced traffic monitoring and control
- High-density port configuration
- Real-time diagnostic capabilities

Compliance

Industry Certifications

ISO 9001, CE, RoHS, FCC
