

Network Security Appliance with Firewall and VPN

This high-performance network security appliance is designed for comprehensive threat protection and network optimization. It features advanced firewall capabilities, intrusion detection and prevention systems, VPN support, and traffic management tools.

Overview

Comprehensive Network Security Solution

This high-performance network security appliance provides robust threat protection and network optimization for enterprise-level environments. It integrates advanced firewall capabilities with intrusion detection and prevention systems to ensure maximum security. Additionally, it features reliable VPN support and traffic management tools to maintain seamless network performance.

Key Performance Metrics

System Performance Overview

3000 Series

Entry-Level Model Capacity

8000 Series

Enterprise-Level Model Capacity

Technical Capabilities

Supported Security Functions	Advanced Firewall, Intrusion Detection System, Intrusion Prevention System, VPN Support, Traffic Management
Deployment Environment	Enterprise-level deployments requiring high reliability and robust security

Model Variants
