Overview

Professional Network Infrastructure Solution

This robust network server cabinet is engineered to house and protect sensitive IT infrastructure in demanding environments like data centers, server rooms, and office spaces. Featuring a secure, lockable design with advanced thermal management through integrated ventilation slots, it ensures your critical equipment remains safe and operational. The unit is built for flexibility, including adjustable mounting rails and mobility casters, making it an ideal choice for organized and scalable network management.

Physical Specifications

Rack Standard	19-inch rack-mount
Mobility	Caster wheels, Easy mobility, Stable base

Security & Design

Front Door

Lockable • Transparent viewing panel • Mesh ventilation

Performance & Management

Cooling & Ventilation

- Side ventilation slots
- Mesh front door airflow
- Optimal operating temperature maintenance
