

Nissan Z24 Engine Carburetor

This carburetor is designed for Nissan Z24 engines. It mixes air and fuel for optimal combustion, utilizing a float chamber, jets, and throttle valve to precisely manage the air-fuel mixture.

Product Overview

Engine Performance Component

This carburetor is precision-engineered for the Z24 engine, serving as a critical component for optimal air-fuel mixing. Designed to ensure reliable combustion, it incorporates essential features such as a float chamber, calibrated jets, and a responsive throttle valve. Its robust construction is built to withstand demanding automotive operating conditions, providing consistent performance for engine maintenance and repair needs.

Technical Details

Key Components

- Float chamber
- Fuel jets
- Throttle valve

Part Number	16010 21G61
Engine Compatibility	Z24

Performance

Application

Automotive • Engine Component
