

No Waterway Core Barrel

This core barrel is a specialized drilling tool for efficient core sampling in geotechnical and geological investigations. Its robust construction ensures durability and reliability in demanding drilling conditions.

Product Overview

Core Barrel Capabilities

The No Waterway Core Barrel is a specialized drilling tool engineered for precision core sampling in geotechnical and geological investigations. Its robust construction ensures durability in demanding drilling conditions, while the waterway-free design simplifies operation and maintenance. This tool is specifically optimized for high-quality core recovery in challenging environments where traditional water circulation is not feasible.

Technical Specifications

Cutting Tool Type	Roller or Hob with water channel
Applicable Formations	Very hard rock, Rebar Concrete
Customization	Yes
