

Non-Contact Infrared Thermometer

This infrared thermometer measures temperature without physical contact. It features a digital display and is suitable for various applications including industrial maintenance and food preparation.

Overview

Professional Non-Contact Temperature Measurement

This non-contact infrared thermometer is designed for precise, hygienic temperature monitoring across diverse environments, including industrial maintenance and food safety applications. By eliminating the need for physical contact, it ensures operator safety when measuring surface temperatures of moving parts or hard-to-reach objects. The device features a clear digital display for rapid, reliable data acquisition.

Technical Specifications

Measurement Range

320 °C

Max Temperature

Device Type

Non-Contact Infrared Thermometer

Features

Key Features

- Non-contact measurement for enhanced hygiene
- Digital display for easy reading
- Suitable for industrial and food preparation use
- Safe for moving or difficult-to-reach objects

Applications

Industrial Maintenance, Food Preparation, Surface Temperature Monitoring
