

Non-Ferrous Metal Cutting Saw Blade

This saw blade is precision-engineered for cutting non-ferrous materials. It features durable construction and optimized tooth geometry for clean and efficient cuts.

Product Overview

Professional Precision Cutting

This precision-engineered saw blade is specifically designed for cutting non-ferrous materials with high accuracy. Featuring optimized tooth geometry, it delivers clean and efficient cuts while minimizing noise and vibration during operation. It is an ideal solution for industrial miter and table saw applications, ensuring smooth results on aluminum, plastics, and various non-ferrous components.

Technical Specifications

Applications

- Miter Saws
- Table Saws

Performance Features

Vibration Reduction • Noise Control • Precision Geometry • High Durability

Compatible Materials

Aluminum, Plastic, Non-Ferrous Metals
