

# Non-Ferrous Metal Grinding Abrasive Roll

This abrasive roll is designed for polishing non-ferrous and carbon steel. It offers good polishing performance for various applications.

## Product Overview

### Professional Abrasive Roll for Metalworking

This high-performance abrasive roll is engineered specifically for the grinding and polishing of non-ferrous metals. It is also highly effective for carbon steel applications, delivering consistent material removal and a smooth surface finish. Designed for durability and efficiency, this tool is an essential asset for deburring, surface preparation, and fine polishing tasks in industrial environments.

## Application Details

### Primary Applications

- Grinding
- Polishing
- Deburring
- Surface preparation

### Compatible Materials

Non-ferrous steel, Carbon steel

## Performance

### Polishing Performance

High Efficiency • Smooth Finish
