

Non-Insulated Blade Terminal

Non-insulated blade terminals are designed for secure and reliable electrical connections. These terminals feature a blade-style contact for insertion into mating connectors, ensuring efficient power or signal transmission.

Product Overview

Reliable Electrical Termination

These non-insulated blade terminals are engineered for secure and reliable electrical connections in diverse systems. Featuring a blade-style contact design, they ensure efficient power or signal transmission across various applications. Constructed from high-conductivity materials, these terminals offer a robust and cost-effective solution for wire termination needs.

Technical Specifications

Insulation

Non-Insulated

Ideal Applications

- Electrical systems
- Electronic systems
- Power transmission
- Signal transmission

Terminal Type	Non-Insulated Blade Terminal
Contact Style	Blade
