

Non-Magnetic Stainless Steel Flat Chisel

This flat chisel is constructed from stainless steel, offering enhanced corrosion resistance. It is specifically designed to be non-magnetic, making it suitable for use in sensitive environments.

Product Overview

Non-Magnetic Stainless Steel Flat Chisel

This high-performance flat chisel is crafted from specialized non-magnetic stainless steel, making it an essential tool for environments where magnetic interference must be avoided. It maintains structural integrity and toughness in extreme temperatures, ranging from -250°C to 600°C. Designed for safety and durability, this tool offers an environmentally friendly solution with no radiation or pollution risks.

Technical Specifications

Available Sizes

Model ID	Length (mm)	Diameter (mm)
101	160	16
102	160	18
103	180	20
104	180	22
105	200	20
106	250	22
107	300	24
108	400	26
109	450	26
110	500	30

Performance Features

Operating Temperature Range

-250 °C

Minimum Temperature

600 °C

Maximum Temperature

Material Characteristics

- Non-magnetic stainless steel
- Corrosion-resistant
- High-temperature deformation resistant
- Low-temperature toughness retention
- Environmentally friendly (No pollution/radiation)

Certifications

CE, ISO, SGS, RoHS
