

Non-Pressurized Solar Water Heater

This non-pressurized solar water heater is designed for both residential and commercial use. It uses evacuated tube technology to absorb solar energy and transfer heat, while its durable storage tank minimizes heat loss.

Overview

High-Efficiency Solar Heating

This non-pressurized solar water heater is designed for efficient performance in both residential and commercial settings. Utilizing advanced evacuated tube technology, the system ensures optimal solar energy absorption and effective heat transfer. The unit includes a durable, insulated storage tank engineered to minimize heat loss, ensuring consistent water temperatures. It offers a cost-effective and environmentally friendly solution suitable for various climates and water conditions.

Technical Details

Key Features

- High-efficiency solar absorption
- Insulated storage tank
- Durable construction
- Suitable for various climates

Technology	Non-pressurized evacuated tube
Applications	Residential, Commercial
