Product Overview

Safety-First Engineering

This non-sparking open end wrench is engineered specifically for use in hazardous, potentially explosive environments where safety is critical. Constructed from a specialized copper alloy, the tool effectively minimizes the risk of ignition from sparks near flammable liquids, vapors, or dust. It is an essential tool for professionals operating within the oil, gas, and chemical industries.

Technical Standards

| | |
|----------------------|--------------|
| Compliance Standards | DIN 895 |
| Material | Copper Alloy |

Key Features

Design Benefits

- Non-sparking construction
- Corrosion resistant
- Double open-end design for versatility
- Easy access for tight spaces

| | |
|-----------------------|---|
| Primary Function | Tightening and loosening bolts and nuts |
| Manufacturing Process | Die forged |
