

Non-Sparking Pry Bar

This non-sparking bar is designed for use in environments where flammable or explosive materials are present. It is constructed from non-ferrous metals such as aluminum bronze or beryllium copper alloys, which do not produce sparks when struck against hard surfaces, reducing the risk of ignition.

Product Overview

Industrial Safety Pry Bar

This non-sparking pry bar is a specialized hand tool engineered for use in environments where flammable gases, vapors, or explosive materials are present. Constructed from non-ferrous alloys, it is designed to prevent ignition by eliminating sparks when struck against hard surfaces. It features a robust chisel-shaped end for effective prying and a cylindrical shaft for a secure, comfortable grip.

Technical Specifications

Design Features

- Chisel-shaped end for prying and scraping
- Cylindrical shaft for ergonomic grip

Material Composition

Aluminum Bronze, Beryllium Copper Alloy

Safety & Compliance

Safety Characteristics

Non-Sparking • Explosion-Proof Material • Hazardous Environment Rated

Suitable Industries

- Petrochemicals
- Oil & Gas Pipelines
- Chemical Industry
- Mining
- Aerospace
- Pharmaceutical
- Fire-Fighting
- Defense & Weapon Fabrication
- Paint & Alcohol Processing
- Power Stations
