

Non-Sparking Valve Wheel Wrench

This non-sparking wrench is designed for use in environments with flammable substances. It is made from materials like beryllium copper alloy and aluminum bronze to prevent sparks.

Product Overview

Non-Sparking Valve Wheel Wrench

Designed for critical safety in hazardous environments, this non-sparking valve wheel wrench is an essential tool for industries where flammable gases, liquids, and dusts are present. Engineered to prevent sparking during impact or collision, it provides a reliable solution for maintenance in petroleum, chemical, and mining facilities. Available in two distinct alloy materials, it ensures compliance with safety standards in explosive atmospheres.

Model Specifications

Model	S (mm)	L (mm)	Al-Cu (g)	Be-Cu (g)
2046-1	12	190	145	160
2046-2	14	250	261	289

Material Options

Beryllium Copper, Aluminum Bronze

Manufacturing Technology

Die Forged

Industry Applications

Suitable Industries

- Petroleum Industry
- Chemical Industry
- Natural Gas
- Power Generation
- Railroad
- Mining
- Machinery Manufacturing & Maintenance
