

Non-Woven Abrasive Flap Disc

Non-woven flap discs are abrasive tools used for surface finishing, blending, and deburring. The flexible flaps allow for conformability to the workpiece, making them suitable for contoured surfaces and intricate shapes.

Product Overview

Non-Woven Abrasive Flap Disc

These non-woven abrasive flap discs are professional-grade tools engineered for superior surface finishing, blending, and deburring. Featuring multiple layers of abrasive material arranged radially around a central hub, they provide a consistent and controlled finish across various substrates. Their flexible design allows for excellent conformability to contoured surfaces and intricate shapes, making them an essential choice for high-quality surface preparation.

Applications & Usage

Target Industries	Metalworking, Woodworking, Automotive
Compatible Materials	Metal, Wood, Plastic

Key Features

Primary Functions

- Surface finishing
- Blending
- Deburring
- Removing scratches
- Removing rust
- Surface preparation

Design Benefits

Flexible Flaps • Contour Conformability • Consistent Finish
