

Nonwoven Meltblown Fabric Production Line

This nonwoven meltblown machine is a complete production line for manufacturing nonwoven fabrics. It integrates feeding, processing, and winding systems to ensure continuous production.

Product Overview

Industrial Meltblown Production Solution

This nonwoven meltblown fabric production line is engineered for high-efficiency manufacturing of industrial-grade filtration media and medical textiles. The system features a robust, integrated design comprising a material feeding mechanism, precise tensioning rollers, and a sophisticated control panel for real-time monitoring of production parameters. It ensures continuous, reliable output suitable for demanding industrial applications.

Technical Features

Process Type

Meltblown • Nonwoven

Core Components

- Feeding mechanism
- Tensioning rollers
- Digital control panel
- Winding system

Application

Primary Applications

Filtration Media, Medical Textiles, Industrial Nonwovens
