

Numerical Control Horizontal Milling Machine

This numerical control horizontal milling machine is designed for precision machining operations. It features a robust construction for stability and accuracy, a user-friendly control panel, and a high-speed spindle for efficient material removal.

Product Overview

Precision Horizontal Milling Solutions

The XKJ7125 is a professional-grade numerical control horizontal milling machine engineered for high-precision machining tasks. Its robust construction ensures maximum stability during operation, while the advanced control panel simplifies complex programming workflows. Designed for efficiency, the high-speed spindle provides rapid material removal, making it a reliable asset for diverse industrial milling applications.

Core Features

Key Capabilities

Numerical Control, Horizontal Milling, High-Speed Spindle, Precision Machining

Operational Performance

Control System

Numerical Control

Configuration
