

Offshore Floating Leisure Platform

This offshore platform provides a unique leisure space on the water. Constructed from repurposed shipping containers, the multi-level platform offers a vibrant recreational area.

Overview

Offshore Floating Leisure Platform

This offshore floating leisure platform is engineered by retrofitting a robust deck barge to serve as a versatile maritime facility. It features a fully equipped superstructure complete with essential utility systems, including power distribution, generators, and comprehensive water management piping. With a spacious working area of nearly 3,000 square meters, this platform is designed to host leisure and ancillary facilities in a stable, offshore environment.

Dimensions

Working Area

3000 sqm

Total Working Area

Length	86 m
Width	18 m
