

Offshore Heavy Lift Vessel

This specialized vessel is designed for offshore construction and decommissioning projects. Featuring a large deck, the twin-hull design provides enhanced stability and load-bearing capacity for installing heavy structures in challenging marine environments.

Overview

Offshore Heavy Lift Vessel

The Twin Marine Lifter is a specialized heavy-lift vessel engineered for complex offshore construction and decommissioning projects. Featuring a unique twin-hull design, it offers superior stability and exceptional load-bearing capacity for transporting oversized modules. Equipped with advanced lifting and positioning systems, the vessel ensures safe, high-precision operations even in challenging marine environments.

Operational Capabilities

Core Features

Heavy Lift, Offshore Construction, Decommissioning, Twin-Hull Design, Dynamic Positioning

Deck Configuration

Large deck area optimized for the transportation of oversized modules and heavy equipment

Crew and Logistics

Onboard Facilities

- Large crew accommodation quarters
- Dedicated support personnel facilities
- Integrated helipad for logistics
