

Offshore Oil and Gas Platform Services

These services support offshore oil and gas development projects. They include planning, design, and project management.

Service Overview

Comprehensive Offshore Engineering Solutions

This service provides full life-cycle support for offshore oil and gas development projects, ranging from initial planning and design to project management and final installation. We specialize in the manufacturing and servicing of diverse exploration, production, and storage devices. Our engineering teams deliver customized solutions that meet rigorous international safety and quality standards for global marine operations.

Service Capabilities

Supported Offshore Structures

- Fixed Platforms
- Tension Leg Platforms (TLP)
- Deep-water Buoy Platforms (Spar)
- FLNG
- Semi-submersible Drilling Platforms
- Floating Storage and Offloading (FPSO)
- Marine Engineering Support Ships

Project Lifecycle Coverage

Planning, Design, Project Management, Construction, Installation

Specialized Equipment Services

Customized services for large ports and marine lifting equipment.

Compliance & Quality

Quality & Safety Certifications

ISO 9001:2008 • ISO 14001:2004 • OHSAS 18001:2007
