

Offshore Platform Supply Vessel

This offshore platform supply vessel supports offshore oil and gas platforms. It is equipped with a helipad, advanced navigation and communication systems, and dynamic positioning for precise maneuvering.

Overview

Offshore Platform Supply Vessel

This offshore platform supply vessel is specifically engineered to provide critical support to offshore oil and gas installations. It features a robust design including an integrated helipad, advanced navigation and communication systems, and extensive deck space optimized for cargo transport. With dynamic positioning capabilities, the vessel ensures precise maneuvering and reliable station keeping even in challenging offshore environments.

Vessel Capabilities

Key Operational Features

- Integrated Helipad
- Advanced Navigation Systems
- Advanced Communication Systems
- Large Cargo Deck Space

Maneuvering Systems

Dynamic Positioning, Station Keeping

Vessel Identification

Model Designation

ST-1467

Vessel Name

BOA GALATEA
