Product Overview

Reliable OHV Power Solutions

This series of Overhead Valve (OHV) gasoline engines is engineered for versatility and durability in demanding environments. Designed to power a wide range of machinery including generators and water pumps, these engines feature efficient fuel consumption and robust construction. With options ranging from the GT600 to the GT1300, they provide consistent, high-performance output for both residential and commercial applications.

Compliance & Standards

Certifications

CE, EURO 5, EPA3
