

Oil Exploration Gearbox

This gearbox is designed for oil exploration machinery. It utilizes helical gears for efficient power transmission and reduced noise.

Overview

Robust Engineering for Demanding Environments

The GTM-SY10 gearbox is specifically engineered for oil exploration machinery, ensuring reliable power transmission in challenging operational conditions. It utilizes high-precision helical gears to maximize efficiency while significantly reducing noise levels during operation. Built with a durable casing and high-quality bearings, this unit is designed to withstand rigorous use and provide an extended service lifespan.

Technical Specifications

Model Number	GTM-SY10
Gear Type	Helical
Key Features	Helical Gears, Precision Bearings, Durable Casing, Noise Reduction

Application

Primary Application	Oil Exploration Machinery
Secondary Application	Agricultural Sector
