

Oil-Filled Space Heater

This oil-filled radiator is an electrical resistance heater designed for space heating. It uses oil heated by a heating element to warm the metal casing, distributing heat through convection and radiation.

Product Overview

Efficient Heating Solution

This oil-filled radiator provides reliable and consistent space heating through advanced electrical resistance technology. Designed for versatility, it utilizes heated oil to radiate warmth while an integrated fan ensures rapid heat distribution throughout the room. With built-in safety mechanisms like overheat protection and a tip-over switch, it offers a secure and comfortable heating experience for professional or residential environments.

Technical Specifications

Control Features

- Multiple heat settings
- Adjustable thermostat

Heating Mechanism

Oil-filled electrical resistance

Heat Distribution

Convection and radiation with integrated fan

Safety & Mobility

Safety Features

Overheat Protection, Tip-over Switch

Mobility

Yes

Mounting

Castor wheels for ease of movement
