

Omnidirectional TV Antenna for VHF and UHF Signals

This omnidirectional TV antenna receives television signals from all directions. Designed for VHF and UHF signals, it provides wideband coverage for both digital and analog broadcasts.

Product Overview

Omnidirectional TV Antenna

This omnidirectional TV antenna is engineered to receive television signals from all directions, eliminating the need for manual rotation or complex aiming. It features a robust multi-element design capable of capturing both VHF and UHF signals, ensuring comprehensive coverage for digital and analog broadcasts. Built for resilience, its weather-resistant construction makes it an ideal solution for reliable outdoor television reception.

Technical Specifications

Design Features

- Multi-element radiating structure
- Central mast mounting
- Weather-resistant construction

Signal Compatibility

VHF, UHF, Digital TV, Analog TV

Reception Pattern

Omnidirectional

Installation

Installation

Outdoor

Model Identifier

JBA-824
