

One-Way Flow Control Check Valve

This industrial check valve allows flow in only one direction, preventing backflow. It is constructed from durable materials for reliable performance and easy installation.

Overview

Reliable One-Way Flow Control

This industrial check valve is specifically engineered to allow fluid flow in only one direction, effectively preventing backflow in your systems. Constructed from durable materials, it is built to provide reliable performance even in demanding industrial applications. The design features threaded connections, ensuring that installation and routine maintenance are straightforward and efficient.

Technical Specifications

Flow Direction

One-Way

Connection Type

Threaded

Primary Function

Backflow Prevention

Application & Performance

Performance Features

- Reliable performance in demanding environments
- Suitable for various pressure ratings
- High durability construction

Suitable Media

Various Fluids

Installation

Installation & Maintenance

- Easy installation via threaded connections
- Low maintenance design
