

One-Way Flow Control Valve

This check valve allows flow in only one direction, preventing backflow. It features a durable metal body with threaded connections for easy installation into plumbing systems and includes a manual lever for testing.

Overview

One-Way Flow Control Solution

This durable one-way flow control valve is engineered to ensure unidirectional fluid movement, effectively preventing backflow in critical plumbing and industrial systems. Constructed from robust metal, such as brass or bronze, it offers long-term reliability and ease of installation via standard threaded connections. The inclusion of a manual lever allows for convenient testing and system overrides, while the compact design ensures seamless integration into tight spaces.

Technical Specifications

Installation Features

- Compact design
- Flow direction indicator arrow
- Side outlet for auxiliary connections

Flow Control	One-way (Unidirectional)
Body Material	Brass, Bronze
Connection Type	Threaded
Manual Override	Yes
