

Open-Top Gondola Railcar for Bulk Materials

This open-top gondola railcar is designed for transporting bulk materials such as coal, ore, and aggregates. The railcar features a robust steel construction with reinforced side walls and a reinforced underframe.

General Overview

Industrial Bulk Transport Solution

This open-top gondola railcar is expertly engineered for the efficient transport of heavy bulk materials, including coal, ore, and various aggregates. Featuring a robust steel construction with reinforced side walls and underframe, it ensures long-term durability in demanding industrial environments. The inclusion of side doors facilitates streamlined loading and unloading processes, making it a highly reliable asset for logistics operations.

Technical Specifications

Compatibility

- Standard gauge tracks
- Multiple coupling systems

Key Features

Open-top design • Side loading doors • Reinforced side walls

Model Identifier	C708
Build Materials	Reinforced Steel, Steel Underframe
Exterior Finish	Light gray
