

Operator Cabin for Heavy Machinery

This operator cabin is designed for use in heavy machinery, including excavators and cranes. It provides a safe and comfortable environment for equipment operators.

ADDITIONAL IMAGES

Product Overview

Operator cabins featuring robust frames and large windows for enhanced visibility during operation.

Durable cabin design engineered for operator comfort and safety in demanding industrial applications.

Engineered for Professional Operations

Designed for heavy machinery including excavators, cranes, and forklifts, this operator cabin provides a protected and ergonomic environment. Built with a focus on durability and operator safety, it features robust construction and optimized visibility. The design supports full electrical customization to meet specific machinery requirements, ensuring seamless integration and high reliability.

Compatibility

Compatible Equipment

Wheeled Excavators, Crawler Excavators, Rotary Drilling Rigs, Pile Drivers, Loaders, Road Rollers, Harvesters, Silage Machines, Cranes, Forklifts

Technical Features

Cabins designed with ergonomic considerations and integrated machine controls for a safe operating environment.

Electrical Systems

- Imported KET wiring harness connectors
- Independent R&D electronic monitor instrumentation
- Customizable electrical design schemes
- Integrated meter cluster

Design Advantages

Ergonomic Design • High Visibility • Robust Frame • Customizable Configuration
