

Optical Binoculars for Distance Viewing

These binoculars are designed for magnified viewing of distant objects. They consist of two telescopes mounted side-by-side, allowing both eyes to be used for a stereoscopic image.

Product Overview

High-Performance Optical Binoculars

These optical binoculars are engineered for clear, magnified viewing of distant objects. Featuring a side-by-side dual telescope design, they provide a comfortable, stereoscopic viewing experience for professional applications. Built with durability and usability in mind, the unit includes essential adjustments to ensure optimal clarity and grip for the user.
